

**Power** ⇨ Amount of vacuum bubble of a given size “frequency dep.”

Cavitation is the result of the amplitude of the ultrasonic power

Power is calculated from voltage and current

Competitors publish mainly  
Peak-Peak-Power!  
Not effective usable  
!! Only short time present!!

i.e 37 kHz for 0,027ms  
40 kHz for 0,025ms  
45 kHz for 0,022ms

**Power** ⇨ amount of vacuum bubble ⇨ number of impacts
