

THE NEW

Freezemaster® Cryo

Waterproof protection from the hazards of ultra cold temperatures

The new Freezemaster® Cryo from Polyco is a water resistant, insulated cryogenic glove. It has been specially developed for handling very cold objects.

The waterproof inner membrane is complimented by a water resistant coating that has been applied to the outer surface of the glove, providing additional safety to the user. The fleece liner offers exceptional warmth and comfort in extreme cold conditions. Although developed for more specialised handling applications, the Freezemaster® Cryo is also ideal for other situations where low temperatures are an issue such as storage freezers, cold rooms and frozen food processing.

Caution:

Not designed to withstand immersion in liquid nitrogen or cryogenic liquids

Case Quantity
1 pair per polybag

Handling Applications

- Storage Freezers
- Cold Rooms
- Pharmaceutical Laboratories
- Frozen Food Processing
- Genetics and Biotechnology
- Fertility Clinics
- Cryogenic Gas Bottle Handling
