NEW Innovative Glove Dispensing System

BODYGUARDS®

SafeDon™

ADDED PROTECTION AGAINST INFECTION

BODYGUARDS

COMMITTED TO QUALITY

92.5%

less bacterial contamination than traditionally dispensed gloves

*Following a 6 week trial at various end user sites independent results showed that gloves dispensed from a Bodyguards SafeDon unit harboured on average 92.5% less bacterial contamination than those gloves dispensed from a traditional glove box over the same period of time."

Julie Wiggins BSc, Technical Projects Manager, Bodyguards

Bodyguards SafeDon CD

See for yourself just how revolutionary the Bodyguards SafeDon glove dispensing system really is.

92.5% less bacterial contamination than traditionally dispensed gloves*

WHY **BODYGUARDS**® **SafeDon**™

ADDED PROTECTION AGAINST INFECTION

Despite the introduction of hand-washing initiatives, the level of hand-washing cannot be guaranteed to reach 100% compliance. Gloves, traditional glove boxes and dispensers can themselves be a vehicle for contamination!

Bodyguards SafeDon™ Gloves are dispensed individually from the bottom of the box. This unique dispensing mechanism ensures that the user does not touch the gloves within the box or the box itself whilst donning gloves, this helps to minimise cross contamination.

Dispensing any glove type "Cuff 1st" helps to reduce the contamination normally caused by the traditional glove dispensing methods by which the user can touch the glove box with dirty hands or remove gloves from the box by the fingers or palm areas.

The Bodyguards SafeDon™ glove box is securely contained within a dispensing unit that has an anti-microbial protective additive which helps to prevent the build up and growth of organisms on the glove dispenser.

The Bodyguards SafeDon™ system provides an effective infection control solution for use where hygiene is essential.

With appropriate use of gloves and the adherence to hand hygiene policies the principle of gloves dispensed "Cuff 1st" from a dispenser could potentially reduce the risk of cross contamination.

In a recent study Bodyguards SafeDon dispensed gloves had 92.5% less bacterial contamination than traditionally dispensed gloves.*

KEY BENEFITS

An innovative glove dispensing system featuring many key benefits to the user including:

NEW CUFF 1ST DISPENSING SYSTEM

Hygienic system for dispensing and donning gloves. Each glove is dispensed individually and can be donned hygienically "Cuff 1st" without touching the fingers and palm areas of the glove, this helps to reduce the potential risk of cross contamination.

TIME EFFICIENT

Fast, easy dispensing saves time.

COST EFFECTIVE

Minimise glove wastage as gloves are dispensed individually and disused gloves cannot be put back into the box which helps further reduce cross contamination.

ERGONOMICALLY DESIGNED DISPENSER

The Bodyguards SafeDon™ acrylic wall mounted dispenser keeps gloves away from contaminated surfaces and can be wiped down to maintain hygiene. The acrylic dispenser features an anti-microbial additive and has been designed without joins to avoid harbouring bacteria and trapping moisture.

FLEXIBLE GLOVE OPTIONS

Each compact cardboard dispensing box contains 100 nitrile, latex or synthetic gloves (X/Large glove boxes contain 90 gloves except for Vinyl). When the box of gloves is finished, simply remove the empty box and replace with a new box.

What people really think of the new Bodyguards SafeDon dispensing system

"We found this new way of dispensing gloves really useful. The gloves were much easier to dispense from the box as it was wall mounted. The way the box is designed means that there is no way you can touch the other gloves in the box and when you take a glove out of a box you don't have to touch the box itself either, our Carers found this very useful. The box is a lot more compact and is really neat and helps free up work surfaces."

Emma Snell,
Killamarsh Residential Care Home, Sheffield

"A really good idea. The gloves only come out one at a time so they are much easier to dispense and much more hygienic. The SafeDon box is also mounted on the wall so we always know where the gloves are and this means that gloves are not laying around taking space up on our work-surfaces. This new way of dispensing disposable gloves is a really really good idea."

Sheila Underwood, Cattery Manageress,
Thornberry Animal Sanctuary, Sheffield

"The Bodyguards SafeDon system is excellent for us, we have the dispenser in the main treatment room near the sink, the gloves are easy to reach and we always know where they are so the system is very convenient and the gloves are dispensed very easily one at a time."

Sarah Tyson, Practice Nurse,
Dr Tyson and Partners, Co Durham

"This new system is excellent for us. We use the Bodyguards Safedon dispensing system all of the time now at our different practices. The gloves are so easy to dispense and as they only come out one at a time we have no glove wastage and the one at a time dispensing system is an excellent way to help to minimize cross contamination. As our nurses vary in size, the different size gloves we use are all held in the triple dispensers neatly on the wall so there is no need to have lots of different glove boxes lying on the work surfaces."

Helen Mitchell, Practice Manager,
Minto Road Dental Care, Sheffield

"The size of the box is really compact and neat. The wall mounted dispenser is so flexible and it is great that we can now get the glove boxes of the trolleys and save more space on the work surfaces. It is good that the gloves are dispensed one at a time from the bottom of the box so that we do not have to put our hands in glove boxes to get the gloves out."

Alison Hurst, Healthcare Assistant,
Nethergate Medical Centre, Dundee

"We are really pleased with the new Bodyguards SafeDon Dispensing system, it is used in the Play Area, it is convenient, neat and compact and the gloves dispense very easily."

Eileen Taylor, Dudley Lodge,
Family Assessment Centre, Coventry
